

Atlantik Group

Experience. Expertise. Excellence.

ABOUT US

ATLANTIK GROUP is an international group of companies incorporating various assets created with an aim to realize large scale international projects in animal and poultry farming.

MISSION:

To create highly effective agricultural enterprises and ensure their high profitability within the entire lifecycle.

AIM:

Relying on our decades-long experience, expert knowledge and cutting-edge technologies, provide our clients with in-demand products, professional services and assistance in realizations of their most ambitious projects.

KEY AREAS OF ACTIVITY:

- Design and construction of objects.
- Equipment systems for animal and poultry farming.
- Feeding, veterinary care, genetics.
- Business planning, management of completed objects, technological consulting.

Among the agricultural project developers, we are the only company that renders such service. We feel our responsibility when doing this.

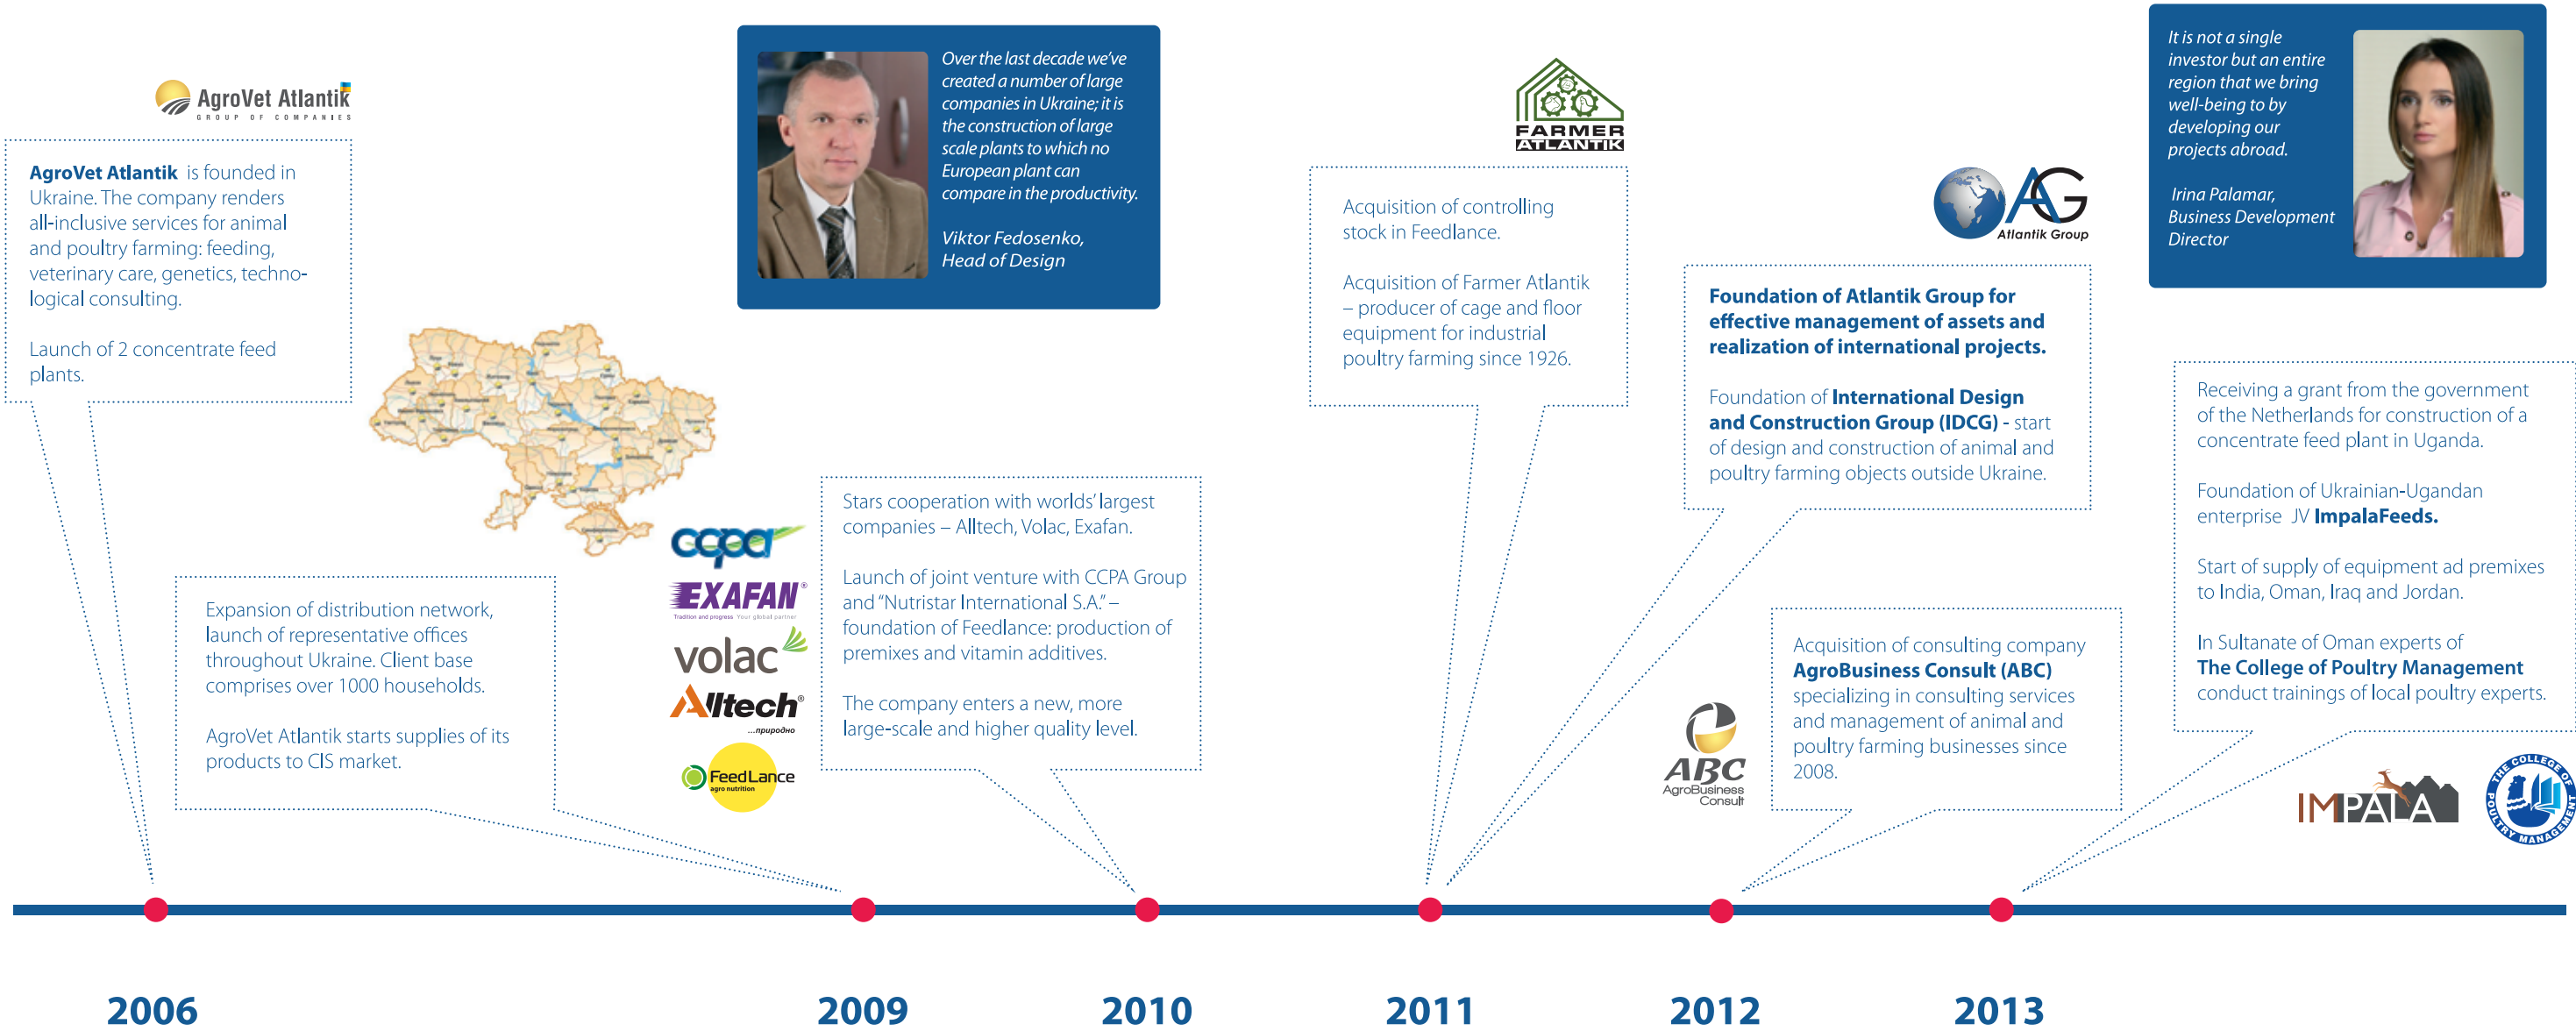

Maxim Shevchuk, CEO

Atlantik Group is a unique developer of “turn-key” projects in animal and poultry farming.

Atlantik Group - EXPERIENCE. EXPERTISE. EXCELLENCE.

OUR HISTORY

Today Atlantik Group is a dynamic international company, a unique developer of animal and poultry farming projects.

DESIGN AND CONSTRUCTION

To run large-scale agricultural projects outside Ukraine Atlantik Group has created **International Design and Construction Group (IDCG)**.

Main task of IDCG is design and constructions of “turn-key” projects of various scale and complexity all over the world.

IDCG exploits **special approach** to designing industrial, civil engineering and agricultural objects. We conduct thorough analyses and carefully guide our object from the initial design stage up to commissioning, taking full responsibility for what we have created.

At the phase of **preliminary planning** of any new agricultural enterprise, the ATLANTIK GROUP shall:

- Perform in-depth analysis of geographical, climatic and even political conditions which might affect the project's implementation.
- Thoroughly study risk and opportunities of the market.
- Develop a detailed plan for the investment return.

By assuming responsibility for the design at the very first phase, we exclude the possibility of any errors which might cause irreversible consequences in the future.

Viktor Fedosenko, Head of Design

At the most important production stage – **design** – IDCG experts conduct scrupulous preparation of technical documentation, technical drawings, mockups, plans for the future plant, as all the further work will depend on this crucial design phase.

At the phase of **construction** IDCG experts start the construction of buildings, casting concrete sites, laying pipelines. At the same time, based on the client's needs, they would purchase any necessary equipment.

EQUIPMENT

Production company **Farmer Atlantik** has a rich history and a wealth of experience in poultry cage production. Founded in 1926 as an agro-industrial technology factory, half a century on, in early 1970s, the company concentrated exclusively on agricultural machinery production. In 1978 it launched its first set of cage equipment for laying hens. As of today, for the 35 years of operation, we have produced and supplied over 7000 sets of cage equipment to CIS and other countries.

Our team of highly qualified engineers and technical specialists continuously works to improve design, technical characteristics, quality and reliability of equipment. For our production we use top quality zinc plated steel and components of own make and of leading European manufacturers. This is why our slogan is "Real Steel". And we mean it. The prime advantage of our cage equipment is practicality and durability. And numerous sets of our equipment installed throughout CIS countries decades ago truly prove this.

We equip plants at the highest quality. For example, we have our own effective floor housing technology, but if any new more advanced elements turn up in the market, we build them in into our comprehensive proposal.

*Vladimir Litovchenko,
Technical Director*

The accumulated experience makes possible for the ATLANTIK GROUP experts to ensure:

- Perfect equipping of slaughter houses and concentrate feed plant construction.
- Installation of incubators, grain elevators, effluence recycling systems and industrial refrigeration systems.
- Equipment for parent stock breeding and poultry housing systems.

In poultry and animal farming a **passport to success is feeding.**

Atlantik Group, originating from a feed production company, has a long and successful history in **feed production and rations formulation.**

Excellent quality and high effectiveness of our feed can be proven by our numerous clients from all over the world, who for years have been entrusting their livestock with us.

Having worked with foreign partners, we have learned the poultry keeping problems in hot countries, and we are totally ready to solve those problems.

Viktor Demchyshyn, Chief Poultry Veterinary

MANAGEMENT

Having assumed this level of responsibility (for creation of the object, its supervision, sale of finished product) we have no right to make a mistake at any of the phases.

Maxim Shevchuk, CEO

The main point that sets off Atlantik Group from its competitors is its readiness to organize **the management** of the projects it has completed. In fact, this makes Atlantik Group the only one of its kind. There are few developers that would assume the responsibility for the management of created objects. We do it with ease as we **guarantee exceptional quality** of our work at all stages – from development of business plan to realization of final products.

By assuming the project management, Atlantik Group proposes **three models of cooperation**:

- **START UP**
- **ASSISTANT BUSINESS DEVELOPMENT (ABD)**
- **FULL BUSINESS DEVELOPMENT (FBD)**

START UP

The participation of the ATLANTIK GROUP under this kind of cooperation will last 6-12 months. The developer will provide the company with high qualification instructors (10-12 persons) to assist in streamlining the production processes and training the personnel.

ABD

Cooperation under the Assistant Business Development formula normally lasts from 3 to 5 years. In this case several key positions will be occupied by ATLANTIC GROUP experts. Thus a supervised company would not only get the initial impulse for its development, it would also get managerial personnel responsible for the business development in perspective.

FBD

FULL BUSINESS DEVELOPMENT presumes still more active participation in the operation of the company it has created. That is, the developer would assume the responsibility not only for the START and further effective project management, but for the SALE of the products as well. Thus the ATLANTIK GROUP would act as a partner of the investor.

POULTRY MANAGEMENT ASSISTANT

PMA program gives ability for even young specialists to get high production indicators, and for investors – to control the staff performance and guarantee business profitability.

Oleksiy Reva,
Chief Poultry Technologist

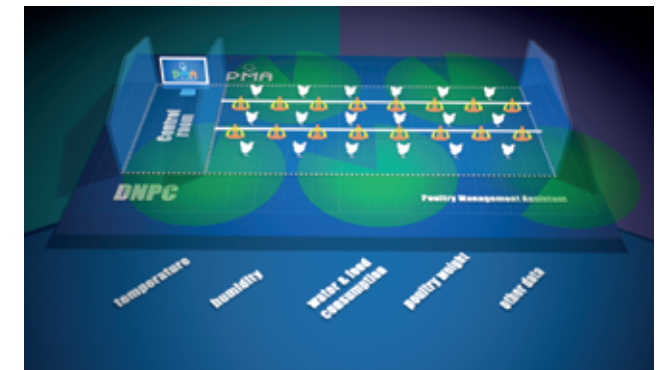

Thanks to the cooperation with Atlantik Group, the investors in agriculture are able to take advantage of yet another unique service – remote management system, named PMA, which can significantly reduce risks and prevent losses due to mismanagement.

PMA – Poultry Management Assistant – is composed of three complementary modules able to function independently of each other:

First module – “DNPC”

With the help of special sensors it collects all the information of the processes in a poultry house - measures temperature, humidity, water and feed consumption, poultry weight and other data. Module then analyses the obtained data, producing graphs and reacting to all off-normal indicators.

Second module – “VIEWER”

Video cameras installed inside a poultry house allow for the constant visual monitoring of the poultry condition, as well as of all the processes taking place inside the poultry house. This module allows technologists and other specialists to remotely monitor all processes at all times.

Third module – “IC”, Interactive communicator

With it, Atlantik Group experts can remotely manage the processes on a farm in real time. This module is in fact an analytical on-line program that enables daily control and record of poultry condition and serves as a link between consultant and a technologist on a farm.

Entrusting their projects with the Atlantik Groups, the investors invest their money, and they do that into the food safety of their country in the first place.

Maxim Shevchuk, CEO

Atlantik Group, a unique developer of agricultural projects, is a reliable and effective business partner ready to ensure in fact rather than in word investment payback on all created enterprises

Today **Atlantik Group** is the constructor of honest, socially responsible business across the globe.

Atlantik group – Experience. Expertise. Excellence.

We are very large scale – this is no longer a myth.

Viktor Fedosenko, Head of Design
